

# World Agricultural Supply and Demand Estimates

United States Department of Agriculture  
Economic Research Service  
Foreign Agricultural Service

Approved by the World Agricultural Outlook Board

WASDE-158

November 14, 1983

## Prospective Global Grain and Cotton Supplies Tighten Slightly; Soybean Supplies Up Marginally; Higher U.S. Broiler and Egg Prices

Estimated 1983/84 world grain supplies are down slightly from a month ago, primarily because of further reductions in the U.S. corn supply. Global soybean supplies are up modestly, as prospects improved for the U.S. crop. The cotton supply estimate is down slightly, with smaller prospective crops in the Soviet Union and Pakistan partially offset by an upward revision in global carryin stocks.

Global crop use in 1983/84 is being dampened by sluggish demand, particularly in less developed countries, and by tighter crop supplies and higher prices. Still, with much smaller U.S. production, global crop stocks at the end of 1983/84 will be down sharply from beginning stock levels. Estimated U.S. animal product output in 1984 is unchanged from a month ago, while fourth quarter 1983 broiler and egg prices have been revised upward because of strong demand.

### Global Grain Situation Tightens Somewhat

Lower global grain supplies and larger utilization in 1983/84 than projected a month ago will further tighten the world supply-demand situation. World grain stocks at the end of 1983/84 are now forecast at 179 million tons, 6 percent below last month's forecast and nearly 30 percent below 1982/83's carryover.

All the projected stock drawdown is occurring in the U.S. Projected foreign stocks are unchanged from a month ago and 3 percent above 1982/83's. The global stock-to-use ratio is now projected to dip to 11.7 percent from last year's 16.7 percent and would be the lowest since 1975/76.

### Reduction in U.S. Feed Grain Supplies Will Cut Stocks Further

Another reduction in the 1983 U.S. corn crop estimate has further tightened the U.S. feed grain supply situation. The 3.5-million-ton (138-million-bushels) reduction from the October estimate now puts the 1983 corn harvest at 105 million tons (4,121 million bushels), less than half the size of last year's record crop and the smallest since 1964. No changes were made in estimates of other feed grain crops, leaving total 1983/84 feed grain production at 135 million tons, 47 percent below last year's.

World and U.S. supply and use for Total Grains, Soybeans, and Cotton

1/ Aggregate of differing marketing years. 2/ Based on export estimates. See individual commodity table for treatment of export/import imbalances. 3/ Includes wheat, coarse grains, and milled rice. The revised production figure reflects a change in the milling rate used to convert China's rice production for 1981/82 - 1983/84 from a rough to milled bases.

As a result of the smaller expected supplies, the estimate of 1983/84 feed use of corn has been lowered fractionally, and ending stocks are now projected to be 18 percent lower than the last projection. The 1983/84 carryover of corn is now forecast at 13 million tons (512 million bushels), only 16 percent the size of the burdensome 1982/83 carryover. The current projected carryover is somewhat larger than the stocks levels sustained during the 1973-75 period but, with use levels higher now, the forecast stocks-to-use ratio is 7.6 percent, about equal to the 1973-75 average.

Moderating the tightness this year are record wheat supplies and relatively ample availability of other feed grains. Feed use of wheat was already projected at a record level of 10 million tons (350 million bushels). Forecasts of the feed use of sorghum and barley have now also been raised significantly from the last report: sorghum by 6 percent to 13 million tons (500 million bushels); and barley by 17 percent to a record 7 million tons (340 million bushels). Despite the projected 18-percent drop from 1982/83 in feed use of corn, the additional feeding of other grains will limit the decline in feed use of all feed grains to 13 percent.

The export forecast for barley has been raised 20 percent from the last report because of extraordinarily large June-September shipments and continued strong demand worldwide. The new export projection of nearly 2 million tons (85 million bushels) would be the second highest on record. As a result of the stronger demand for barley, the projected price range has been raised to \$2.55-\$2.80 per bushel from the previous \$2.40-\$2.65.

Lagging shipments to date have prompted a slight downward adjustment in the 1983/84 sorghum export projection to 6 million tons (225 million bushels). The forecast price for sorghum is unchanged at \$3.10-\$3.40 per bushel.

Despite the tighter U.S. supplies, the corn export outlook remains firm and the projection is unchanged. Competitor supplies will continue to be limited until Southern Hemisphere harvests next spring. The price outlook continues strong, with the projected range remaining at \$3.40-\$3.80 per bushel, compared with last year's average of \$2.70.

Wheat Forecasts  
Unchanged

Minor adjustments were made in 1981/82 and 1982/83 domestic use and export figures for wheat; no changes were made in 1983/84 forecasts.

Rice Crop Estimate  
Raised Slightly

The 1983 U.S. rice crop estimate was raised slightly from a month ago to 103.3 million cwt., still a third below last year's crop. The additional supplies should increase the projected ending stocks level to 34.4 million cwt., not quite half the 1982/83 ending level. The rice price forecast for 1983/84 is unchanged at \$8.50-\$10.00 per cwt.

### Soybean Supply-Use Prospects

#### Little Changed for 1983/84

A 20-million-bushel increase in the U.S. soybean crop estimate this month points to only a slight change in tight U.S. and world supply-use balances. An increase in the projected U.S. carryover this month to 140 million bushels is less than 8 percent of total use and less than 1 month's use.

In the product markets, soybean oil supplies have been reduced this month primarily because of a lower carryin level following a good 1982/83 year-end movement for soybean oil exports. The tighter vegetable oil supplies are reflected in a 100,000-ton reduction in soybean oil exports and slightly lower oil carryover stocks. The cut in oil exports is mostly in response to larger oil crop prospects in some key importing countries, particularly India.

Producer prices for soybeans in the United States are unchanged from last month's forecast of \$8.50 to \$9.50 per bushel (\$310 to \$350 per metric ton).

### Broiler and Egg Prices

#### Higher Than Expected

This fall U.S. broiler and egg prices have been higher than expected. Broiler production has been slightly larger than a year ago, but demand for broilers is stronger. The broiler price forecast for fourth quarter 1983 has been raised to 49-52 cents per pound, up from the previous forecast of 44-48 cents. The demand for eggs has also been stronger than expected. Egg production has been reduced from year-ago levels; and with the stronger-than-expected demand, prices have risen sharply this fall. The egg price forecast for fourth quarter 1983 has been raised to 81-84 cents per dozen, up from the previous forecast of 78-82 cents. All other supply, use, and price forecasts for livestock, poultry, and milk are unchanged.

### U.S. Cotton Export Prospects Enhanced

#### by Reduced Foreign Competition

Production problems in a number of foreign countries are altering the world cotton outlook for 1983/84. Global output is forecast at 65.3 million bales, down 1.4 million from last month and 2.4 million below 1982/83. Meanwhile, consumption may total about 69.3 million bales, slightly below October indications but still 1.7 million above last season's record. Consequently, stocks are expected to fall about 4 million bales below the revised beginning level of 28.9 million.

The 1983/84 foreign cotton supply-demand balance has tightened over the past month as production has been adjusted down in a number of major producing countries, including Pakistan, the Soviet Union, Egypt, and Mexico. Foreign output is now placed at 57.8 million bales, 1.3 million below a month earlier. Tighter supplies mean reduced availabilities for both mill use and exports. Foreign consumption is estimated at 63.4 million bales, 0.2 million below the October forecast while exports abroad are forecast at 13.2 million bales, 0.4 million bales below last month's

projection. As a result, stocks are expected to total about 20.8 million bales, slightly below the revised beginning season level. Beginning stocks for 1983/84 differ from those published last month due to a significant upward revision in Egyptian stocks, beginning with 1980/81.

A sharp downward revision in production for several major competitors has enhanced U.S. export prospects for 1983/84. U.S. shipments may total about 5.6 million bales, 0.3 million above last month's assessment and moderately above 1982/83. This season's commitments (exports plus outstanding sales) are running 30 percent above a year earlier. The mill use forecast remains at 6 million bales which coupled with prospective exports would result in disappearance nearly a million bales above 1982/83's 10.7 million. With the 1983 U.S. crop still forecast at 7.5 million bales, ending stocks are expected to be worked down to 4 million, 0.4 million below a month earlier and nearly 4 million below the beginning level.

Although 1983/84 world cotton trade prospects remain close to last month's indicated 18.4 million bales, the mix has shifted somewhat. The United States is expected to garner a larger export share at the expense of some competitors, notably Pakistan. The U.S. share is placed at 30 percent, up 2 percentage points from last season, as 1983/84 foreign exports are forecast to dip to the lowest level since 1976/77.

\*\*\*\*\*

1/ Aggregate of differing local marketing years. 2/ Total foreign and world use have been adjusted to reflect the differences in world imports and exports.

3/ Includes EC (including intra-trade), other Western European countries, Eastern Europe, USSR, and Japan.

4/ Includes Canada, Australia, Argentina, South Africa, and Thailand.

5/ World imports and exports may not balance due to differences in marketing years, grain in transit, and reporting discrepancies in some countries.

*****				

1/ Data based on local marketing years except for Argentina and Brazil which are adjusted to an October-September year.

2/ Major exporters include Brazil and Argentina. 3/ World imports and exports will not balance due to differences in local marketing years and to time lags between reported exports and imports. Therefore, world supply may not equal world use.

---

1/ Marketing year beginning September 1 for soybeans; October 1 for soybean oil and meal. 2/ The "probable variation" reflects the root mean square error and/or standard error of estimate from trend and judgment. Chances are about 2 out of 3 that the outcome will fall within the implied ranges. 3/ Simple average of crude soybean oil, Decatur, cents per pound. 4/ Simple average of 44 percent protein, Decatur, dollars per short ton. 5/ Based on an October year crush of 965 million bushels.

1/ Marketing year beginning Aug. 1

1/ Marketing year beginning Aug 1.  
2/ Less than 50,000 bales. 3/ Includes Western Europe, Eastern Europe, Japan, PRC, Korea, Taiwan, and Hong Kong. 4/ Includes the USSR, Pakistan, Egypt, Sudan, Turkey, Central America, and Mexico. 5/ Total trade of individual countries, including intra-regional trade. World imports and exports may not balance due to cotton in transit and reporting discrepancies in some countries.  
Note: Totals may not add and stocks may not balance due to rounding, a small quantity of cotton destroyed, and differences unaccounted.

U.S. COTTON: UPLAND AND EXTRA LONG STAPLE 1/
